Product Decorating & Printing Modular Systems

Pad Printing is a wet process in which a three-dimensional plastic, glass, metal, rubber or wooden part can be decorated. Pad Printing provides versatility for medical, electronic, industrial & speciality products regardless of shape, size, material or surface.

Pad Printing Principle

Standard Machines

Custom Pad Printing Machines

Rotary Pad Printing Machines

Consumables

Applications

4 Color Pad Printing machine with part shuttle

Pad Printing can successfully decorate three-dimensional parts because while transferring the image to the part the silicone pad wraps around or adapts to the shape of the part without distorting the image, given some size restrictions. Through pad printing machines we specialize in decoration of glass, ceramics and chain-ware.
