

AMTEC

Applied Manufacturing Technologies, Inc.

Modular printing

The Modular printing is provided with a rotary table with automatic pad printing machines for a more-colour print up to maximum 7 colours including pre-treatment, intermediate drying and end drying of the product. The output is 400 up to 1200 cycles per hour.

The output depends not on the number of colours, but on the print surface. Some applications:

- Objects that need to be printed on different locations with mixtures of print units (90 – 160mm)
- All kind of applications for plastics, electronics and mechanical industry and customized installations
- Optionally, the machine can be adapted for use of thermoplastic inks to print on ceramics and china (cosmetics, catering industry, pharmaceutical industry,...)

General specifications:

- Ink cup diameter: 90 mm up to 220 mm
- The number of pad printing machines on the machine determines the number of colours/positions
- The patented ink cartridge allows easy and fast changing of printing plate and ink on all pad printing machines
- The pad is quickly changeable on each pad printing machine. We provide a magnetic fastening with accurate positioning by means of dowel pin

Modular pad printing system up to 8 colors; with Pad Cleaning Device
